The “Natural” Solution to Your Clean-Up Problems!
• Non-Toxic  • Non-Corrosive  • Non-Flammable  • Safe and Effective

Bugman Bio-Treatment Products utilize micro-organisms that are formulated to provide a safe, effective, and economical method to remove and biodegrade harmful and unsightly hydrocarbons such as oil, diesel fuel, gasoline and crude oil spills. With strict Federal regulations and guidelines now in place regarding the elimination and remediation of hydrocarbon contaminates, Bugman Bio-Treatment Products are your “natural” solutions to safe and effective surface and sub-surface hydrocarbon clean-up problems.

BUGMAN’S SHUR-STEP SURFACE CLEANER

Bugman’s Shur-Step Surface Cleaner is used to remove and biodegrade oils and greases on concrete and other hard surfaces! Oil and grease spills on hard surfaces, like concrete, are normally hard to clean. Bugman’s Shur-Step allows the job to be done with ease. When activated by water, the micro-organisms in Shur-Step rapidly degrades substances such as oil, diesel, gasoline and crude oil spills. With only a stiff 24-inch bristle broom, Shur-Step will clean your hydrocarbon based spill the natural way—quickly and efficiently!

• Quick & Efficient  • Re-useable  • Continues to Work as Long as Hydrocarbons Exist

Application and technical information available upon request.

BUGMAN’S SOIL GUARD BIO-TREATMENT

Bugman’s Soil Guard Bio-Treatment is specifically formulated to remediate hydrocarbon contaminated soil up to 2 inches in depth! The micro-organisms in Bugman’s Soil Guard is highly recommended for topical applications where light contamination has not penetrated more than two inches below the surface. When mixed with the proper nutrients and water, raked or tilled into the soil, a 25-lb. pail of Soil Guard will remediate up to 200 square feet of contaminated soil. Use Soil Guard to clean up after equipment maintenance and broadcast around mechanical equipment areas to keep them free and clean of hydrocarbons.

Application and technical information available upon request.

BUGMAN’S LIQUID CLEANER

Bugman’s Liquid Cleaner is a water based microbial cleaner/degreaser that has been specifically formulated to replace caustic detergents and regulated solvents! Intended for cleaning oily surfaces, the micro-organisms in Bugman’s Liquid Cleaner will effectively biodegrade petroleum and organic hydrocarbons and will continue to colonize and restore both old polluted or newly contaminated areas. In addition to surface cleaning, this cleaner will also reduce contaminates and oily sludge in oil, grease traps, clarifiers and runoff areas. Current regulations requiring removal of hydrocarbon contaminates and ozone depleting solvents make Bugman’s Liquid Cleaner an acceptable, efficient alternative to costly and un-safe detergents and solvents.
